- Unique operating area for customers or for the cash operator
- Its operating principles are related to the integration with a cash system (POS and/or ECR)
- It is connectable with retail softwares developed in any operating systems
- Connection through LAN TCP/IP (Ethernet)

FOCUS ON:

Cash payments can have a significant impact in retailers' profits depending on whether the money is managed or not. According to latest studies, about 90% of retailers don't have a system that manages cash in a safe and effective way. Commercial activities with an effective cash management solution benefit of higher profits, lower costs, higher safety and a more effective sale process. Many shops manage their cash money manually and this makes their activities vulnerable to calculation mistakes, cash shorts and thefts' risks. Cash manual handling diverts time to the staff penalizing the service and the attention toward the end customer.
